## Introduction

### Drugs?

Any substance that generates a biological response, Good or Bad.  
No drug is totally safe; Drugs vary in their side effects.

The dose level of a compound determines whether it will act as a medicine or as a poison.

The therapeutic index is a measure of a drug's beneficial effect at a low dose versus its harmful effects at higher dose. A high therapeutic index indicates a large safety margin between beneficial and toxic doses.

The principle of selective toxicity means that useful drugs show toxicity against foreign or abnormal cells but not against normal host cells.

## Classification

### Chemical structure

penicillins, barbiturates, opiates, steroids, and catecholamine's  
cephalosporins, sulphonamides, opioids, and glucocorticoids

### Pharmacological effect

analgesics, antipsychotics, antihypertensive, anti-asthmatics,  
and antibiotics

### target system

neurotransmitter

### target molecule

anticholinesterases are drugs which act by inhibiting the enzyme

Subject: - Letter of Appreciation for the Guest Lecture....

Dear Sir,

On behalf of management, staff and students of H R Patel Institute of Pharmaceutical Education and Research, I wish to thank you for the discussion on "Medicinal Chemistry – New Drug Discovery". I believe that the knowledge you have shared will help immensely in the development of the attendees.

I appreciate the time you took out of busy schedule to join us and thank you for sharing your insight, expertise and experience. Your willingness to volunteer your time, energy and support is greatly appreciated.

Again, many thanks for your time and effort.
